ACE TrackRunner

HIGH SPEED COMPUTERIZED TRACKING SYSTEM

The award winning ACE TrackRunner is a versatile high speed tracking system for the Broadcast and Film industries. It is able to move any ACE remote head/camera combination (including the larger gyro-stabilized remote heads) up to a combined weight (camera plus head) of 350 lbs. at high speeds with a cable management system that is unique in the industry today. This system has been tested with the energy chain cable management system at speeds of 30MPH with a 175lb payload and is capable of reaching speeds of 60MPH. Placed at the performance level along the floor, the ACE TrackRunner's small footprint and unique cable management provide the Director with the ultimate in tracking shots. The Sleds (dolly's) are "captured" on the track, and the clever "energy chain" cable management system is contained within the track section making it ideal for overhead applications. The energy chain rides on a special Teflon like surface keeping the noise generated by the system to a very acceptable level making it ideal for both sports and entertainment venues. The precision track comes in 2meter (6.6') sections and can be ordered in Silver/Grey for outside use or Black for entertainment uses. Precision curved track (Black) is available in 2meter 20° sections. Custom curve track can be bent to job specifications. Curve and Straight track can be combined to provide flexibility for track layout. The Sled (dolly) is controlled remotely by a computerized joystick or operator foot pedals that can be operated at a distance of 3000' from the track set-up. The computerized handset can be programmed by the Technician to store start and end marks as well as ramps and speed gates. Redundant emergency stop buttons for the sled are provided for safe high-speed operation.
